

aristomusic

Company

Aristo Music is a specialist in new selection and distribution techniques for digital music. It is a Belgium-based company that works in close cooperation with the universities of Leuven and Ghent, conducting research to introduce new techniques and insights in digital music solutions. Aristo Music's objective is to create a world in which everyone can create his or her most suitable musical atmosphere, at any time, in any location or in any situation. A close cooperation between experienced music experts and a team of dynamic software specialists is the driving force behind the enterprise.

Music Metadata Java Analyst/Developer

Job content

You take part in the improvement and extension of the Aristo Smart Music Engine. You are responsible for solving music-technological and music metadata related issues. You work in close cooperation with the experts of the music lab: you meet their needs by developing new software features and adjusting the music processing factory. At the same time, you apply their expertise when creating metadata and playlist generators.

Profile

- You have a master's degree in computer science or similar
- You have an analytical mind
- You are creative and good at conceptual thinking and can work autonomously
- You have between 3 and 5 years experience with Java
- Experience with Python, signal analysis and machine learning is a plus
- You have a basic degree in music or play a musical instrument
- You are fluent in Dutch and English

The offer

You are not afraid of taking initiative and you have a strong personality? You like working in a team, but you are also capable of working on your own? Then maybe you are the person we are looking for. We offer you a challenging job with a lot of variation and an attractive salary.

Please send your CV and motivation to jobs@aristomusic.com.
